

TOP 15 ADVANTAGES

1. **Optional stoker opening** to convert from wood to coal and biomass burning.
2. **Self venting expansion stack.**
3. **R20 fiberglass** is used on walls and roof. Styrofoam is used on the bottom.
4. **Extra large insulated door** with gasket seal. Door is adjustable to maintain controlled burn.
5. **Adjustable aquastat and natural draft damper.** Natural draft is more efficient than forced air draft.
6. **Low water cut-off and water level sight gauge.**
7. **Heat exchange water tubes**, through the firebox, increases heat transferring surface area and efficiency.
8. **Cast iron grates** ensures longer life and lets you remove ashes without extinguishing fire.
9. **High efficiency water jacket** ensures fast recovery.
10. **7 gauge steel firebox ensures long life.** Large chamber easily takes 4' long logs or square bales. Big capacity keeps refueling down to a minimum.
11. **Returning cooled water is uniformly distributed** along the top of the water jacket.
12. **Insulated stainless steel chimney** is standard. Hinged baffle at chimney re-directs exhaust gases for a secondary burn.
13. **Lifting ring.**
14. **Pull out ash pan** on all models. **Separate ash pan door** on models V-92 and VI-92.
15. **Double latch door system.**
